UNIFIED FIELD THEORY—A GEOMETRIC APPROACH

Contents

Contents	p.i
1. Gauge Field Theory and fibre bundles.	p.1
1.1 Gauge Field Theory.	p.1
1.2 The equations of motion for a gauge field.	p.13
1.3 Gauge group and geometry.	p.25
1.4 Fibre bundles—Generalities.	p.36
1.4.1 Topological bundles.	p.36
1.4.2 Vector bundles.	p.40
1.4.3 Topological fibre bundles.	p.42
1.4.4 Local description.	p.52
1.4.5 Differentiable fibre bundles.	p.70
1.4.6 Vector bundles.	p.81
1.4.7 Principal fibre bundles and associated bundles.	p.86
1.5 Connections on a Principal fibre bundle.	p.105
1.5.1 Definitions and basic properties.	p.105
1.5.2 Connections on a vector bundle—Covariant derivative.	p.136
1.5.3 Another way for the construction of connections on a vector bundle.	p.147
1.5.4 Linear and Riemannian connections.	p.164
1.5.5 Vector valued differential forms.	p.195
1.5.6 Curvature in a connection in a principal fibre bundle.	p.202
1.5.7 Curvature and torsion forms in linear connections—Curvature and torsion tensors.	p.218
1.5.8 Holonomy group.	p.235
1.6 Gauge field theory and fibre bundles.	p.266
2. Unification of gauge field with gravitation (the Einstein-Yang-Mills field).	p.282
2.1 The geometric framework.	p.282
2.2 Riemannian geometry of a fibre bundle with fibre G/H and a given action of a Lie group G .	p.311
2.2.1 The structure of a simple G -space.	p.311

- 2.2.2 Fundamental and invariant vector fields. p.320
- 2.2.3 G -invariant metrics on E . p.329
- 2.2.4 Curvature tensors for G -invariant metrics. p.341
- 2.2.5 Color charges, scalar charges and the particle trajectories. p.346
- 2.2.6 Some complements on G -spaces. p.349
- 2.3 G -Invariance of Einstein-Yang-Mills systems. p.351
 - 2.3.1 Symmetries of a Principal Bundle. p.351
 - 2.3.2 Several bundle structures of the principal bundle U . p.357
 - 2.3.3 Lie Algebra decomposition and the Vielbein. p.362
 - 2.3.4 Reduction of the Einstein-Yang-Mills Action. p.369
- 2.4 Geometry of matter fields. p.390
 - 2.4.1 Description of matter fields. p.390
 - 2.4.2 A summary of differential geometry on fibre bundles. p.394
 - 2.4.3 The case of a bundle $P = (P, \Pi, M, G)$ endowed with a principal connection w and whose base is endowed with a linear connection. p.408
- 2.5 Harmonic Analysis and dimensional reduction. p.414
 - 2.5.1 Harmonic expansion (generalized Peter-Weyl theorem). p.414
 - 2.5.2 Induced representation and harmonic analysis. p.426
 - 2.5.3 Harmonic expansion—Generalized Frobenius theorem. p.440
- 2.6 Dimensional reduction of the orthogonal bundle. p.457
 - 2.6.1 Adapted orthonormal frames. p.457
 - 2.6.2 The effective gauge group. p.463
 - 2.6.3 The affine connection in an adapted orthonormal frame. p.468
