# IRREDUCIBLE REPRESENTATIONS OF THE LORENTZ AND THE POINCARÉ GROUPS

## Contents

Contents p.i

1. The Lorentz and the Poincaré groups. p.1
2. Irreducible representations of the proper Lorentz group  $\Lambda_+^+$ . p.35
  - 2.1 Finite dimensional representations (non-unitary). p.35
3. Irreducible representations of the Lie algebras  $SO(3)$ - $SU(2)$ . Clebsch-Gordan coefficients and Wigner-Eckart theorem. p.41
  - 3.1 Irreducible representations of  $SO(3) - SU(2)$ . p.41
  - 3.2 The special unitary group  $SU(2)$ -A different approach. p.71
  - 3.3 The 3-rotation group  $SO(3)$ . p.90
  - 3.4 Clebsch-Gordan coefficients (C.G.). p.116
  - 3.5 The Wigner-Eckart theorem. p.133
    - a) The tensor operators. p.133
    - b) Application in  $SO(3) - SU(2)$ . p.146
4. Irreducible unitary (infinite-dimensional) representations of the proper Lorentz group. p.164
5. Irreducible unitary representations of the Poincaré Group. p.174
  - 5.1 Casimir operators. p.174
  - 5.2 Null vector case  $C_1 = 0$  and  $p^0 = \vec{p} = 0$ . p.180
  - 5.3 Time-like vector case  $C_1 > 0$ . p.182
  - 5.4 Light-like case  $C_1 = 0, p^0 = \vec{p} \neq 0$ . p.188
  - 5.5 Space-like case,  $C_1 < 0$ . p.194
  - 5.6 Covariant Normalization of basis. States and integration measures. p.198

**6. Spinor representations of the proper Lorentz group.** p.202

- 6.1 Quaternions and  $SL(2, \mathbb{C})$ . p.202
- 6.2  $SL(2, \mathbb{C})$  and Lorentz group. p.210
- 6.3 Introduction to spinors. p.215

**7. Clifford algebra and spinor representation for a pseudo-orthogonal group.** p.232

- 7.1 Generalities on the Clifford algebra. p.232
- 7.2 Transposition. p.236
- 7.3 Hermitian Conjugation. p.241
- 7.4 Spinor representations of the Pseudo-Orthogonal groups. p.248
- 7.5 Covariants. p.257
- 7.6 Reduced Basis. p.264

**8. Spinors in a general Minkowski space.** p.268

- 8.1 Clifford group and representations. p.268
- 8.2 Spin groups and spinors in a general Minkowski space. p.276
- 8.3 Majorana and Weyl spinors. p.279
- 8.4 Charge conjugation matrix and Majorana-Weyl spinors. p.288

**9. Lorentz group and spinors—Dirac Algebra.** p.302

- 9.1 Dirac Algebra. p.302
- 9.2 Irreducible representations of the Poincaré group—The Casimir operators method. p.308
  - 9.2.1  $p$  timelike-class I. p.313
  - 9.2.2 The class II representation  $p$  lightlike,  $p^2 = 0, p \neq 0$ . p.319

**10. Poincaré group and Dirac spinor fields—Dirac equation.** p.323
